## Macalloy Inspection & Maintenance Services

---

Macalloy sends out expert technicians to check, maintain and extend the life of their installed systems.

They help keep everything running smoothly with services like:

- Initial system inspections
- Drone inspection services
- Detailed reports on system condition
- Fixes and maintenance if needed
- Load testing to ensure safety and performance
- Adjusting tension- either loosening or tightening
- Extended warranties for systems that get regular care

Macalloy Site Services offers expert inspection and maintenance for buildings that already have Macalloy systems installed. By working directly with their team, you'll get reliable, up-to-date info on how your system's doing. And since the original manufacturer handles everything, you can relax knowing it's all taken care of—giving both you and your client total peace of mind.

## The importance of regular maintenance

Keeping up with regular maintenance is key to making sure buildings stay safe and functional over time - especially when it comes to steel parts, which can rust if left unchecked.

One project (image 1) did things right: they set up a 5-year inspection plan, used sealant to block out moisture, and kept everything in good shape with routine checkups. After each visit, they re-applied sealant to keep corrosion at bay.

Another project (image 2) skipped all that. No sealant, no maintenance for nearly 20 years—and it showed. The tension bars were badly corroded, proving just how important it is to stay on top of upkeep.
